

DataBase Backup Utility Crack+ (Final 2022)

DataBase Backup Utility is a lightweight and efficient software solution developed to provide you with a reliable means of creating backup files for your databases, thus preventing you from completely losing their contents if something were to go wrong. The program is very easy to use, meaning you do not need any experience with similar tools or even in working with databases. All you need to do in order to backup your files is to input the source location of the file you want to work with, then set a save path. You can then press the 'Backup' button and the operation will begin shortly, first asking you whether you accept the risk of deleting the contents of the save directory, so be careful which folder you choose. Afterward, the utility will

finalize the process, its duration depending on the size of the input database. DataBase Backup Utility also allows you to perform the reverse operation, that is to 'Restore' the data from the backup file into its initial location or anywhere else you want. If you happen to experience problems with your machine or run into an issue that causes all the contents of your database to be deleted, you can load the latest backup file, then push on 'Restore' to regain access to the information. However, note that the generated data is not compressed, but kept in its initial form, thus not damaging it in any way. At the same time, DataBase Backup Utility does not provide you with the ability to encrypt the backup file, meaning you need to think of other protection measures. To conclude, DataBase Backup Utility is a simple yet useful application which is meant to help you create backup files for your databases, so you never run the risk of permanently losing your data in case of a system failure, for instance. It is a new type of off-line password manager, based on the client/server technology, this software product allows to store your usernames and passwords in a multi-user secure manner. The program is capable of operating alone or as a server which holds a central database of user and password information that all clients can access and login. In addition to storing the required information, you also have the ability to categorize users and passwords into groups and select the file format for each of them. Moreover, you can specify the encryption or protection algorithm to be used for each user/password pair, so users with different passwords will be identifiable from each other. What is more, the program

provides you with the ability to recall your last used passwords for each group, so you can come back to the same information without any hassle. In addition, you can also download password data from a remote server without compromising any security. Using Client/Server Password Manager: 1. Start the Client/Server Password Manager. 2. When you are prompted, enter the system root password to start the application. 3. To add a new user and password, click on the 'Add' button at the top right corner of the window. 4. After you enter the user and password, press 'Ok'. 5. Now you can access your password manager and manage the lists of users and passwords from a Web browser. Client/Server Password Manager Features: Unique Features: • New type of password manager which allows to store and manage your usernames and passwords from an internal or remote server database. • All the passwords are protected with a unique key which is generated from the information entered by the user. • All the data are synchronized with the central database server and all the clients use the same key in order to access the password manager. • You can enter the same password for several users at the same time and you can define the users belonging to each of them. • All the users can be placed

into different groups, each of them having its own passwords and access rights. • You can also specify the protection algorithm for each group. • You can also save the passwords into different file formats, and then select their encryption and protection algorithm. • You can also use the program as a password service to provide your users with their accounts and passwords. • You can also download the password data from the central database server, bypassing the Internet. • You can also create
