Power Search is a small utility that lists every file that contains the file in question. If a file is saved to more than one location, all locations are listed. Power Search can also list every disk drive that has the file in question on it, regardless of how many times the file is saved to that drive. Searching is done by searching for the file within the Windows installation and CD / DVD / Network and hard disk volumes. The results of the searches are displayed in the tree view. So it is easy to search for a file on each volume and make sure it has not been saved to more than one location. Power Search Full Description: Power Search is a small utility that lists every file that contains the file in question. If a file is saved to more than one location, all locations are listed. Power Search can also list every disk drive that has the file in question on it, regardless of how many times the file is saved to that drive. Searching is done by searching for the file within the Windows installation and CD / DVD / Network and hard disk volumes. The results of the searches are displayed in the tree view. So it is easy to search for a file on each volume and make sure it has not been saved to more than one location. Power Search Demo Version: The demo version shows you how it works and tells you about some of its features, but it does not have all the options that the full version has. To get the full version you have to download the full version zip file. You can get the full version at the following address: * Tested with Windows 2000, 2000 Pro, Windows Me, Windows XP, Windows Vista and Windows 7 To use this program, first double-click on the.ZIP file to start the installation. You must extract the contents of the ZIP file to any drive and then follow the instructions in the README.txt file. After the setup program has finished, double-click on the Start Power Search button on the Windows desktop. You can then use the program normally. The full version of the Power Search program contains the following features: Description: Power Search is a small utility that lists every file that contains the file in question. If a file is saved to more than one location, all locations are listed. Power Search can also list every

What's New In Power Search?

Power Search is a free utility to help find corrupted and missing files on your system. Power Search replaces corrupted versions of system files with a smaller, but working version. The utility works by replacing the corrupted versions of a file from the System's cab files with the original version. It also finds the files that are stored more than once on your system and delete the copy that is stored in archive. Power Search uses a system scan to find the corrupted and missing files, in order to fix them automatically. This utility also uses a system scan to replace the corrupted files, which means you don't have to do it manually, each and every time, which saves you lots of time and effort. After you save the results, you can see the files that are replaced and you can delete the current versions of files with Power Search. Which means you can have a clean file in just a couple of minutes. Mores features: * Powershell version 2.0 and above support. * Compatible with Windows 2000, Windows XP, Windows Vista and Windows 7. * Finds corrupted and missing files from Windows XP, Vista and Windows 7 using the system scan. * Finds corrupted and missing files from Windows 2000 and Windows 98. * Finds corrupt files on the CD's and diskettes. * Finds large files that are stored more than once on your system. * Delete files from archives and free space on your disk. * Finds disk defect files and other empty space on your disk. * Finds duplicate files and replace them with the original file. * Creates a backup of files before they are replaced and replaces original files with the backup. * Detects duplicate files on the fly. * A working file is not replaced, if it is not present on the system. * Creates a simple and easy to read report. * Shows files status before and after replacement, which shows the changes. * Use the provided help to learn more about it's features. * Results are saved in a text report and a simple table. What's New: Version 1.1.2.0: * Improved the detection of a larger number of files. * Added support for newer version of Windows. * Fixed an issue with the version of the OS. * Improved the detection of the larger number of files. * Added an option to display only the names of the files. * Added an option to display the sizes of the files. * Added an option to display the system ID of the files. * Added an option to display the time of the files. * Added an option to display the group id of the files. * Added an option to display the version of the OS. * Added an option to display the description of the files. * Added an option to display the CPU

System Requirements:

Memory: 4GB CPU: Intel Core i5 Hard Disk: ~10GB GPU: NVIDIA Geforce GTX 550TI Recommended System Specifications:
Memory: 8GB CPU: Intel Core i7 Hard Disk: ~20GB GPU: NVIDIA Geforce GTX 650 Ti DirectX: Version 11 Graphics Card: Nvidia
Geforce GTX 550TI Processor: Intel Core i3 DirectX: Version 10 Graphics Card: Nvidia Geforce GTX 460
