Development of AutoCAD began in the mid-1970s at the RandD Engineering Department at the University of Illinois at Urbana-Champaign under the direction of John Evans, a retired engineer from Honeywell. Evans led a small team of four other engineers that developed the tool, based on technology from Evans' Master's thesis at the University of Waterloo in 1975. Evans had created a drawing tool that was simple enough for engineers to use but was powerful enough to accommodate even the most complex designs. In 1978, Evans brought his team to the Autodesk offices in Santa Monica, California. The first version of AutoCAD, called "AutoCAD 1", was released in October 1982. AutoCAD was originally distributed only to university researchers. A year later, Autodesk released the version 2, AutoCAD 2, to the public. AutoCAD 2 is the first version of AutoCAD to have a wider application beyond the engineering and manufacturing community. In 1983, a new version of AutoCAD, AutoCAD 3, was released with several major changes. One of the most important changes was the "hot spot" user interface, which allowed users to navigate through a drawing and make changes directly to specific objects. AutoCAD 3 also introduced the Drawing Manager, a shared drawing repository. In 1984, AutoCAD 4 was released and included an integrated construction database (IBB) capability. In 1986, AutoCAD 4.1 was released, adding 3D capabilities, including geometric modeling and drafting. By the late 1980s, users were making over 100,000 drawings per month using AutoCAD. Command-line operations, which include processes that start or stop AutoCAD from the command line. They are useful for automation and debugging. History AutoCAD was originally developed in 1988 by Al Balsley and Tom Ward. Development was completed in early 1989 and the first public release was version 1.0. The first AutoCAD release included only command-line driven functionality, but later it was also capable of using the graphical user interface (GUI). Following the release of AutoCAD version 4.0 in 1994, the program was bought by Autodesk in 1995. The program was released as "AutoCAD" (originally "Autodesk AutoCAD") with the exception of versions 4.0 and earlier, which were released as "AutoCAD LT". The original system of organization of the content of

AutoCAD was the drawing area. Version 4.0 changed the drawing area to a perspective view. In this way the drawing area was removed from the drawing area context and from that moment it became the new default perspective.
