Desktop applications AutoCAD's XML-based development environment was extended to create an XML-based Visual LISP. This was later enhanced by adding XML-based AutoLISP. In 2007, AutoCAD Extended, a free AutoLISP for the Mac, was introduced. Since 2008 the release of AutoCAD 2009, the first release that is capable of handling binary files, more robust methods for native path text and time and date values, all while being less than 3% larger, has made the use of AutoLISP, though still important, less necessary. AutoCAD X, a RAD (Rapid Application Development) environment, was released for AutoCAD 2007 in April 2008. Web-based applications In 2003, Autodesk released a prototype for a Web-based version of AutoCAD, which was released in 2007. AutoCAD is available on various platforms including Windows, macOS, Linux, iOS, and Android. AutoCAD is also available in the Chrome OS since version 63 released on September 24, 2017. Autodesk Family Tree is a family tree data visualization and data editing application developed by Autodesk. It is available on Windows, Mac, Linux, Android and iOS. CAD visualization CAD is also available in the form of visualization and data analysis software. Autodesk Grids provides a web-based application for a variety of functions such as data analysis and visualization. In the free version, the functionality is limited to viewing only. It is available on a variety of platforms, including Windows, macOS, Linux, and web. In the commercial version, the functionality is expanded to data analysis and plotting. The applications include prebuilt data visualization tools that allow a user to perform analysis tasks. Interfaces In the past, AutoCAD (with other products) used to be compatible with a variety of third-party interfaces, most notably ADP (Autodesk Data Products) and MapInfo. Since the release of AutoCAD 2009, support for ADP interfaces has been discontinued, and support for MapInfo interfaces has been limited to only the earlier MapInfo versions. However, the interface for MapInfo Pro software, including the MapInfo Intergraph Viewer, is supported. MapInfo Intergraph Viewer works with several types of overlays, including aerial photography, satellite imagery, and vector-based overlays, and can also display data in paper form, called a paper ca3bfb1094
