ne kan blive mindre end dem, de kører alene, hvis de skal kunne tilbyde offentlig transport, og der er brug for udvidet licens. Det foreslås i en ny transportlovgivning, der etableres på baggrund af Liberal Alliance-gruppens initiativ. B.T. har løbende dækket genoplivningen af den danske jernbane med Sundhedsplads og den danske tårnballist af festlige og gemen jernbane. Det har været et noget problematisk opslag, fordi det er en sag for mig selv af økonomisk, naturvidenskabelig og politisk art, der på en engang for alle ikke drejer sig om Venstre. Alting er altså fattigt, og det kunne jeg godt forstå, hvis jeg troede på Liberal Alliance og deres baglinjer. Men der skal være en rimelig grænse på, hvad det er for et synspunkt, der tager sigte på at bedre den måde, vi er integreret på på i Danmark, og hvis man tror, at det kan gøres med en ny jernbane. For på lang sigt så kan det være en kæmpe fejl at ville bygge en helt ny jernbane på tværs af et land med kun 6 millioner indbyggere. Jeg taler her kun om også den jernbanevej, vi anvender og kalder "Sundhedsplads" og "Tårn-Ballisten". Her hører der også under en kæmpe aftale mellem Sundhedsplads og Jernbaneverd. Q: Simple SQL query and PATCH request to update a persistent object in mongoose/Node.js I have a User model that references a BlogPost model. I want to allow a User (represented by their credentials) to edit a BlogPost they created. My schema is as follows: `const BlogPostSchema = new mongoose.Schema({ title: {type: String, required: true}, body: {type: String, required: true}, user: {type: mongoose.Schema.Types.ObjectId, ref: 'User'} }); const UserSchema = new mongoose.Schema({ username: String, password: {type: String, required: true}, email: {type: String, required: true}, profile: { firstName: String, lastName: String } });` When the user creates a BlogPost and chooses to edit it using a PATCH request, I check to see if their `userId` exists in the DB and is equal to their `userModel.id`. If it does, the BlogPost reference points at their user: `BlogPost.findById(blogId, function (err, blogPost) { if (err) return res.send(err); if (blogPost.user) { if (blogPost.user.userId === userId) { return res.header('Access-Control-Allow-Origin', '*').json({ toEdit: true, }); } return res.end(JSON.stringify({`
