**- TWITTER - IG - FACEBOOK - STEAM - GOOGLE PLAY A 3D open-world fantasy action RPG** ■ **The Place to Tarnish The Lands Between** is a vast and disorderly region in the Far East, where everything seems to be smouldering. In this region, where the natural beauty of the world is all you can see, there lies a deeper but more sinister truth. The elder races have long since withdrawn from the Lands Between, and only the most feeble creatures claim it as their home. To protect their territory, the Elder Races abandoned their land, which is now almost uninhabited. As this is a region ruled by magic, there are very few people here. Among these few, however, are the Races of the Elder, and their desire is to regain their glorious lands and the power and technology of their old age. ■ **The Place to Show Off The Lands Between** is said to be the last outer frontier, and it is a place filled with monsters. In this vast and disorderly land, it is said that heroes will go beyond the border for the first time, and there they will try to prove themselves. As a result, the people of the Lands Between also call these heroes "Elden". ■ **The Place to Establish Trade** Establishing a trade route takes more time and effort than traveling a usual path, but the people of the Lands Between often do so. This is due to the fact that this region is not as easily traversed as the other areas, and the people living there are in a place to establish a trade route. Of course, it is harder to penetrate. ■ **The Place to Battle Monsters** As monsters increase, the land begins to get wild, which makes it easy for the people to find a place to venture. The place where the people travel is similar to a playground for monsters, and the place where monsters gather is a convenient place to kill them. ■ **The Place to Discover New Adventures** This is a region that seems to have an endless flow of monsters to fight, and it is a region inhabited by various races. Within this region, there are the lesser known kinds of monsters, as well as forgotten monsters that still stalk the region

**[Gene expression analysis of the nerve injury and repair]. There is increasing evidence that permanent disorders following nerve injury include molecular and cellular mechanism, resulting in permanent physiological deficits. The axonal injuries and the re-growth of injured nerves are important precondition for the final outcome. Regeneration after nerve injury aims to restore the function and structure of the injured nerve and to reduce the complications following surgery. When the injury and repair strategy can be optimized, the possibility of full recovery after severe nerve injuries is greatly increased. To realize gene therapy in nerve injury and repair, it is essential to understand the function of nerve injury and repair at the molecular levels.
