Genetic analysis of trypanosomatids has revealed a remarkably conserved signalling pathway that is essential for cell growth and differentiation. An essential function of this signalling pathway is to regulate gene expression by means of signal recognition and transduction. This review summarizes the knowledge on the Jak-STAT (signal transducers and activators of transcription) signalling pathway in trypanosomes, with a focus on the proteins that are involved in tyrosine phosphorylation and protein-protein interactions. The trypanosome genome contains homologues of many proteins involved in the Jak-STAT signalling pathway including the members of the mammalian STAT protein family, the SOCS protein family and a putative homologue of the tyrosine kinase JAK1. The functional analysis of conserved components of this signalling pathway will help to improve our knowledge of the basic biological process of trypanosome differentiation and parasite-host interactions. Influence of prophylactic antibiotics on the surgical outcome of patients with primary openangle glaucoma and cataracts. To evaluate the effect of the preoperative administration of intraocular prophylactic antibiotics on the outcome of surgical treatment of patients with primary open-angle glaucoma (POAG) and cataracts. Outcome measures included the intraoperative and postoperative success rates and postoperative complications. Univariate and multivariate analyses were performed to evaluate the effect of preoperative antibiotics on various patient characteristics, including a history of previous ocular surgery. The Kaplan-Meier method was used to estimate the cumulative success rates. One hundred thirty-six consecutive patients (132 eyes) with POAG and cataracts were enrolled in the study. In 74 patients (61%), no antibiotics were given preoperatively; in 44 patients (36%), ceftazidime (0.5%) was administered before surgery and in 14 patients (11%) vancomycin (0.6%) was instilled. Among the 44 patients (36%) who received preoperative ceftazidime, the postoperative cumulative success rate was 88.0% at 1 year and 79.2% at 2 years; for the 14 patients (11%) who received vancomycin, the rate was 82.9% at 1 year and 78.6% at 2 years (P

A: I have reproduced your problem (same MacOS and same version of Xcode as you, but I had Chrome 36.0.1904.0, so I cannot compare). I don't know the reason why you are using AIR and I don't know why it's not working. You can install xcode command line tools by using command line: xcode-select --install Such a basic-looking, multi-functional pack from Piaggio that so many of us take for granted will soon be history. The much-loved battery-powered Vespa has been axed following a decision to move to fully-electric mobility. Its demise has left thousands of British fans of the iconic scooter both heartbroken and relieved. Another popular scooter, the Matchless, will make a similar transition to pure battery power. Its future is also in doubt. (Image: Piaggio Group) The new, all-electric Vespa will come equipped with a 360-volt powertrain - 50 per cent more power than a standard version of the bike. It will have a range of about 100km when fully charged, Piaggio says. A 450cc engine with a traditional combustion powertrain is available as an option. The Vespa is not going out of production, which is bad news for industry watchers since it is one of the more successful names in the scooter market. However, replacement models will only be sold in electric form, says Piaggio, which is bucking the trend set by rival manufacturers to move to electric only scooters. Carmakers such as Kawasaki, BMW and KTM have all been exploring other fuel types for their traditional combustion-engined bikes. This has led to a big debate over whether the future for the

traditional scooter is on the decline. (Image: Piaggio Group) Piaggio says its decision to go electric is not driven by the sales of traditional, combustion-powered scooters but because it is the future. "The replacement model will be an electric model," says Piaggio's Francois Fantacci. "The aim is to continue selling the original Vespa. We have big plans to design electric vehicles for other markets. We cannot say at this point what models we will be producing." Last year, the company sold 250,000 Vespa
