At NPB we absolutely love dogs! Not that we're huge fans of ours and our dogs or anything... but we just really do. For those unfamiliar with the NO NAME blog post, we breed a Norwegian White Retriever Cocker Spaniel. This means that he is in the DNA coded as both a Retriever and as a Cocker Spaniel and therefore is shipped a true breeding combination of both breeds. This weekend, though, my Border Collie bit a little male's thigh. Like seriously bit. It was probably no more than a couple of millimeters or so, but that's enough to warrant stitches. It's a bit of a mystery because he was provoked, so nothing to worry about either way. But whenever anyone asks, I consider pointing to my little "adorable" pooch and say that my male is actually the one who was twice

The game contains 9 levels. The levels are set in simulated "galaxies", with 80 "planets" and hundreds of "asteroids". The objectives are clear: destroy the enemy's ground forces, and destroy their space defence vessels. And destroy all enemies before they destroy you. We did our best to make the levels balanced and interesting. We used all the possibilities of the engine to create and new enemy and weapon types. There are as much new weapons as there are stars and galaxies! Inspect Your Game Gameplay: You can inspect the game maps, enemy types, weapons and ships in the menu at any time. Now, it's time to become a "The Nimbatus - The Space Drone Constructor" space super-user! Time to take on the galaxy! Download the game right now! If the iOS is not an option you can get the PC version for \$9.99. It supports an iMac. Nov 19, 2018 Very Good Game but broken The game is free on the App Store, but on the website it's \$9.99. It seems like they are very cheap on the \$9.99 version to avoid theft. Oct 05, 2018 Worth the price Great game with a lot of depth. Original music, great visuals, and a good ending. Oct 05, 2018 Great game This game is awesome, as is the original, and for this price you should certainly try it out. Jul 29, 2018 Realized how good this game was I downloaded this on my iPad and it got my attention straight away. I loved how the characters and their interactions were done with such simplicity. The music makes the game seem like it's more than just a video game. I enjoyed this game a lot and I am planning to check out the original and this game. May 10, 2018 This game was a must buy and worth \$10.00. Really great game with plenty of fun in it. Reminded me of

is one of my favorite games for Android. It only took me 6 years to unlock this one. It's a soccer simulation game where you create, customize and play around you with your soccer team. There's plenty of customization and great little mini-games while building your dream team. Check it out and see how they did on the final match. And you can also buy the game on Google Play for \$3.99. There was one big mistake on Google play, making people have to pay \$4.99 to get this game, instead of what it's supposed to be \$3.99. The funny thing about this is when you have the internet on the phone, none of the Google apps will work! It's free for Google Play. So for us Android user, we don't have to worry. And, we don't want to mess around if people can still get it on Google Play, we want to see what they did on the final match! This was a very interesting story. Now we have images to share and some open questions we had. I mean, how can they afford all these good things? It had some few questions to be clear up. And hopefully I can share it with you the next time. Radio Nucleo Radio Nucleo The most important effect of an isolated beta-quantum inside the atom is that it distorts the atomic wave-function, as there are some changes of the wave-function which are not detectable when the beta-quantum energy is compensated by the alpha-quantum energy. The name for the wave-function distortion is "beta-oscillations" and could be shown as "oscillations in time". With the wave-function of an atom inside a solenoid, this effect can be seen. It is the first, and probably the most important, effect of the phase uncertainty between the beta- and the alpha-quantum. A smaller effect arises if a gamma-quantum is attached to the atomic nucleus, something that is much more difficult to detect. It is the second most important effect of the radiation from a radioactive nucleus, in our everyday lives we seldom notice it. There are some level cross sections for the processes beta-oscillations, in which we can see in how far the nuclear charge acts as a shield for alpha- and beta-particles. If the charge
