Data Defense is a turn-based strategy game that places you in the role of a firewall manager. You've been hired to stop Data from exiting your dataports. But when you're sent out there, data leaks and viruses are spreading, causing problems with your servers. Predict when your enemies will arrive and build your defenses to defend your servers from them. Use each server's particular layout to your advantage! Tower's melee abilities and their different power levels will often lead to interesting tactical battles. You get to assemble them however you want, but you'll have to figure out how to balance attack power, speed and defense strength to prepare for the incoming hostiles. You can carry multiple defense programs in your tower and can install them wherever you see fit. Every server has multiple attack paths, which you'll need to block them! Each server also has different status fields, so you'll need to calculate and pay attention to the complete network status. And don't forget! You'll need a server operation system to receive and process data. ★ Set your own path! ★ Over 30 unique towers to play with ★ 40+ unique enemies to fight! ★ Unique weapon abilities and power levels ★ Destroy, absorb or deflect enemies with your towers ★ Invite friends! ★ Customize your strategy with your tower's different upgrade paths ★ Physics driven particles! ★ Loads of unique enemies that will put your defense skills to the test! ★ Hundreds of hours of gameplay! ★ Amazing ambiant music with over 15 tracks ★ Over 50 different maps and challenges ★ Gorgeous vector art! ★ Highlight areas of interest with lasers and border zones, stopping automated attack waves from harming your servers and towers! ★ Supports both Campaign and Survival modes. In Tank Warfare,you take the command of an American or German battalion of eight infantry platoons and a cavalry squadron of two cavalry squadrons.Graviteam Tactics is an entertaining, deep and rich gameplay, divided into two separate modes: operational and tactical. In the tactical mode, you are fighting the enemy in real time; when the enemy appears, it is not a question of course, but simply fire in your weapons.One of the striking features of the gameplay is the possibility to participate in a battle with the enemy, commanding the units with your mouse. FAQ First post - FGR - Foundry Games ResolutionCore Version 1.0 Last update: 14th Feb 2013 Fantasy Grounds is a low level operating system that enables anyone to create their own d20 system. It is completely free and you can download and use it for free from; or FGR version This thread will try to give answers to the questions I have had while creating my system and characters. I'll also try and provide any easy solutions if any of you want to create your own d20 systems. For those who are looking for some high level advice on creating a new d20 system at higher levels, I recommend the following; BEC2 Creating your own d20 systems is a great way to learn new things about the system whilst having fun and keeping your system interesting. I'm going to do a series of posts looking at the problems associated with creating your own d20 system for each of the systems we use in Starfinder (i.e. d100, d8, d6). The following questions I have received so far and the answers I'll provide for each of them: 1. Why would people want to create their own d20 system? Why not just start using a d20 system from Starfinder and do it better (better GM rules and specializations) Well I think it's good to experiment with different table making options. System designers who create their own tables don't get to know how the d20 roll their system works really well or have the advantage of discovering new obstacles that exist inside their game world. Creating

your own d20 system is also fantastic for an in-depth understanding of how your d20 system works. You can spend hours or days creating tables for your own system or creating toolbars for new classes which in turn opens up new specialisations. It also gives you a good grasp on what difficulties you may have when designing these tools with Starfinder's developers. In a nutshell, creating your own system means you'll have the best chance of creating something that will work for you and is something you can recognise as your own work when presented to other people. 2. What should you look for when creating your own d20 system? 2.1 What should you look for in creating your own d20

In Elemental, your only friend in a world of darkness is the Element that controls you. Each Element offers different strategic advantages but the challenge is to harness them in the right way. Use the power of the Elements to defeat an enemy that will use its life force against you, and define the path the story takes. Begin by creating your character with all five Elements from the Class Select screen. After selecting a Class, the Elemental attributes will be unlocked as you discover the elements. Switch between Class elements as needed based on the situation or strategy. Elemental will take you on a constantly changing adventure in an expansive sci-fi world, with new enemies, challenges, and secrets to unlock. Combat controls have been streamlined so you can focus on strategy and combat instincts rather than a ton of different controls. You can block incoming attacks from your enemies by activating a block button. Once a block is activated, you can hold on to it. Pressing a block button again will stop the block. There are three key elements to defending yourself:

1) The Block - block an enemy attack, and press block button again to hold the block. 2) Elements - you can switch between the three Elements and each offers a different strategic advantage 3) Abilities - use the three Element abilities in a combo to deal more damage. You can also select a Special Power for each element. These abilities will activate automatically when the blue Power Meter fills, allowing you to attack and move more easily. The game allows you to mix and match these to create your best style. The more elements you use, the more powerful they will be. Elemental has various difficulty levels to make things challenging. The enemies will be tougher and the level layout will also change based on your current Element strengths and weaknesses. You can also reduce the number of enemies or upgrade their abilities as you level up. Every decision you make will influence the story and your path through the game. Key Features 5 Elements: Each Element offers a different strategic advantage. You can switch between them as the situation demands. Defend and Attack: Block incoming attacks and use abilities in combination. There are no block buttons. It's all about positioning, timing and perfecting your move. Experienced game designer Kotaku awarded Elemental "Best Game, Graphic Design" on PC. They said: "Think of it like a shapeshifting fighting game that features all the awesome beating and punching and slicing you could ask for. The combination
