Figuring out layer attributes Photoshop creates an initial layer as a default first layer, but no layer has a set number of elements. You need to create each new layer or object you want to add to your work, and then make those elements _visible_. The number of layers you can have in an image is unlimited. Some common workflows have 80 layers, but the limit is likely to vary by image size. Most users have fewer than 80 layers. The layer attribute settings that affect layers include the following (from least to most important): * **Opacity:** You can control the transparency of the layer. A layer's transparency defines the extent of the area covered by the layer. If you apply a solid color fill to a layer, the transparency setting becomes not as important, but the layer still creates a change in color wherever the solid color is overlaid. Transparency affects the _alpha channel_ (the channel of color used for the image) and how much the color is affected by other layers and/or previous layer information. * **Effects:** Layers also have an effect area, or the "effects" portion of the layer. You can turn on a highlight, shadow, or other effect that will work on the whole layer or on specific areas. * **Masking:** You can mask an entire layer or only specific areas of the layer. The effect of the mask is determined by the layer attribute settings of _masks on_ and _masks off_. * **Paintbrush:** You can paint over the entire layer or specific areas of the

Brushes can be used in conjunction with Ink and Air Brushes (below) to create various effects and, when used with the Eraser tool, can be used to create beautiful, sharp drawings or illustrations. Ink and Air brushes are used to create ink-like, watercolor-like or brush-like effects using the Eraser tool. The Brush Tip feature is a great way to soften edges on a selection or create custom edges and fills. Select from a variety of different brushes: To select a brush, hold down Shift and Ctrl while clicking, or go to Select > Brush Preset > Brush, which will start the Brush Tool. Select either one of these options: Brushes may be selected from the Type tool's Brush Preset panel. Click and drag to move a brush into the Preset panel. From the Brush Preset panel, the Brush Tip Size, Hardness, Flow and other settings can be changed. New Brush Styles Now that you know what each brush is for, let's look at some new Brush Styles that were recently added to Photoshop CS6. Feather Light Stroke This is a fast, real-time, brush stroke that uses two sources of light: a standard Hard Brush and a Soft Light one. Feather Light Stroke is a brush stroke that can be applied in real-time with the Pen tool. It produces a smooth, soft, real-time touch. In addition, this brush stroke has been designed to be a soft brush stroke, with soft lighting and other properties similar to a traditional light source such as a sun, a candle flame, or a flashlight. This brush stroke offers versatility and realistic realism. You can use the Gradient tool (V) to feather the transition from one brush to the next. Warp Warp The Warp Warp tool allows for warping the stroke as it is applied using the Pen tool. The Pen tool is used to draw shapes around the stroke. Once the shape is created, the Stroke Tool (P) applies the stroke, producing the final effect. This brush has been created using an artistic technique. This brush stroke offers a unique approach to creating designs. Custom Stroke You can generate custom shapes in the Brush tool using the Shape tool, a technique that allows you to create oval, polygonal, and star shapes

the same fate as before. Just as before. Mom disappeared, and my heartache is second only to my anger. Jelly is the name I give the adult Megan. I have been waiting for her since that day. A piece of me is that thirteen year old girl, and I know how she feels. How the boy left. I understand the sense of loss. If I had an older sister, I would be that older sister. I fold my arms and study my fingernails as I hear more water. If I had an older sister, I wouldn't have to pick sides. I wouldn't have to forget about her. But she didn't have an older sister either. Something moves across the surface of the water. It's faint, but it's moving fast. My heart races. I know what to do. I push off the rock face I'm sitting next to. My legs glide through the water, and I push into a swimming crawl that takes me across the open canal. I'm breathing heavily, and my heart pounds in my chest. With my other hand, I hold the tip of my right fin and swim faster. I can hear the other fins slapping the water, the clicks of two fish heads rubbing together, the faint rush of the current. I listen for the movement of tail scales. But I can't be sure. I'm sure he's here, close, but I can't see him. I don't even know which way he's swimming, and I'm sure he sees me. I'm sure he's close, but he's not close. I want to scream, but I dare not do so. What if my screams were heard? No. I mustn't stop. In my heart, I pray she's here, that my sister is here with me. Across the canal, I lose sight of her, and I have to focus on making it to the other side. I can feel her heat, and she's moving in the same direction, but she's not going to make it across. I'm going to make it. I'm going to make it. I'm going to make it. I'm coming, Megan. I'm coming, Megan. I'm coming. I make it, and then I make a slow turn
