\* \* \* # Relying on the skills of the pros I'm always grateful when I receive images produced by a client or agency on a creative-style project. These days, it seems that you can select a style from the top few sites on the web, based on whatever the agency or client wants, and upload it. This isn't the way it used to be. Even if you are lucky enough to be an actual professional designer or photographer, you may not be as adept at the latest image editing techniques as a pro. It's not just image-editing software, such as Photoshop, that's changing the industry, but the whole concept of what people expect from design and photography. Sure, editing images is fun, but in the wider world it's just

a part of life. Fashion, advertising, editorial and entertainment need high-quality images that are creative and engaging, and that, in turn, require graphic designers and creative editors who are skilled at fine-tuning images. \* \* \* ## Using Adobe Photoshop

If you're a beginner, you may not need Photoshop much until you need to create lots of raster images. As an intermediate user, you may find it useful for re-touching images, creating special effects or fixing

imperfections when you're working on your own images. If you need to work with vector images, you'll need to start with

A phosphatidylinositol phosphorylceramidase activity in brain tissue of different ages. In brain tissue of adult and newborn mice, the activities of three different phosphatidylinositol phosphorylceramidases (EC 3.2.1.8) in brain membranes were studied. All three activities

were found to be present and quite stable during development up to the first postnatal week; thereafter the activity of one of the phosphorylceramidases decreased and that of the other two increased. The highest activity was found in adult membranes of the cerebellum and brainstem, while the lowest activity was found in embryonic membranes.

Q: How to get column name that has a null value in a result set using JPA I have a table that has two columns of type date which contains null values. I need to get the column name from the result set that is null. Here is the query: `String query = "select t.employeeid, t.firstname, t.lastname, d.date "+ "from table1 t join table2 d on t.id = d.employeeid "`; This query returns the result in a List, and I want to know how to get the column name. For example, Employee 10 has no data in the table.

Table1	Table2	Employeeid	firstname	lastname	Date
10	val1	val2	null	A	

A: Assuming you have JPA 2.1, I assume you can use the `@Column` annotation, to get a List of the columns

names in your entity class. Then you could check them with the null values and you can also check if the set is empty: List  
columnNames = entityManager.getMetamodel().getSchema().findColumns(entityClass);  
String columnName = (columnNames.size() > 0)? columnNames.get(0) : null; Or since you are using JPQL, you can also use the ColumnPosition annotation with the @Column annotation:  
@Column(name="column1") private Long id; @Column(name="column2", columnPosition=2) private Date date; In this case the names are returned as long string (I guess the column name starts at 0). I recommend using Annotations since the
