Aug 14, 2011 â€” Hello AVSForum, I have an Intel Atom media server that I use exclusively for playing stereo music locally. I want to expand its usage to .NET and WebRTC. I can imagine how this should work: I add an audio player to a class library, implement the IAudioPlayer interface, which uses .NET classes to access audio devices. That would be pretty easy, but I'm afraid .NET is the slow guy. Are there alternatives that I should consider? I only want simple stereo music playback, not a web browser.
