## Fsx Majestic Software Dash 8 Q400

the majestic dash 8 q400 for microsoft flight simulator x is a highly realistic rendition, built after the bombardier (tm) dash8 q400 aircraft.pilot is an edition, designed for home flightsimmers, who want a state-of-the-art hardcore add-on but do not require the complex features, such as the instructor panel system monitoring, circuit breakers simulation, failures simulation, or the shared cockpit. the majestic q400 dash 8 is a masterpiece, of that there is no doubt, however trying to land the thing is something else. i approach at 120 knots with full flaps and it rises above gs so i use some flap relief to 15 and it still struggles. flaps 10 seems to work best but it tries to race and while it is exciting to fly in prepar3d it must be terrifying in the rw. looking at the manual and the various heads-up to pilots you wonder if they should have gone back to the drawing board. warnings like best to fly it on to the runway as plopping it down will send horrendous vibrations throughout the cabin. there are so many it might have occurred to them to start again. are the wings too narrow for example are there any airbrakes apart from those on the ground when the throttles are pulled back.the main plus seems to be it is extremely economical which is probably what they were going for. it is some ride though and any tips would be greatly appreciated ironically, i find the b777 and airbus 320 etc. too easy (you know what i mean) in that once you learn to set up the fms,they do it all for youincluding landing and you are basically a passenger. i have gone back to twin propellers for a little more involvement and was really just making the point that i am surprised that from my research the dash 8is a little difficult plane to fly no less because of its wing design. i am not sure a plane that is unforgiving of poor technique should be awarded a safety certificate.
