What's New In DropBar?

This package installs a Python-based taskbar replacement application called DropBar. It features window lists sorted by application, logical grouping of applications into tabs, drag and drop. It can run as a service or as a desktop application. The goal is to make a single tool that replaces your standard Taskbar, and works by simply adding it to the desktop and giving it mouse or keyboard shortcuts. No need to configure anything, it just works. The application is provided as a single file executable (which installs the application into your application directory. To install it into the application directory you use the following command line: python -m pip install dropbar python -m dropbar To install it as a service you use: python -m service.install dropbar And to install it into the application directory, use: python -m service.install dropbar Usage The dropbar will appear in your application directory. Here you can open the application using: python -m dropbar python -m dropbar.application.open_main This application is written in Python. It requires Python 2.6 or newer and has been tested with Python 2.7. Note: There is no documentation for this application. The files and directory structure are self-explanatory. Installation The installation process simply requires running the above command and then moving the application from the application directory to somewhere on your computer. Dependencies This application depends on Python 2.6 or newer, and PyQT 4.8 or newer. For non-Python requirements it depends on:

System Requirements For DropBar:

CPU: Intel® Core 2 Quad Intel® Core 2 Quad RAM: 8GB or more 8GB or more Hard Disk Space: 40GB Windows® 7/8/8.1/10/XP Intel® Core 2 Quad PROS: DESCONTRO: E3 2012 Info: FINAL VERDICT: Gameplay (7.8/10): Graphics (8.2/10): Sound
