What's New In Theme Installer?

How it works: The application just reads from the settings of a Plus! themes folder, and after reading the settings, it downloads the theme from the theme website and unzips the theme folder to WindowsSystem. It doesn't do anything else. Features: - Simple interface. No extra set of buttons and nothing complicated. Just: - Click on 'Install' to start the process. - Click on 'Done' to stop the process. - Download from theme website or from the local theme folder. - Download from the theme website is used only if the theme isn't already on the local theme folder. - Download from the local theme folder is used always. What it does: - Opens a dialog with the list of themes to choose from. - Click on the 'Install' button to start the installation process. - Click on the 'Done' button to stop the installation process. - The themes that were successfully installed will show in the list. Notes: When starting the process of installing the themes, you can see which templates are installed by clicking on the "Templates" button.
