As mentioned before, I would also like to see the ability to hide advanced options in the View Options dialog. It was done in the latest version of Photoshop Elements and I'm hoping it'll be included in Lightroom 5 as well. It'd be great to have entries like "Show Details" and "Show Grid" accessible only from the Master panel. Overall, I really like the workflow it creates on the web, but it would be nice to see it come to the desktop version of Photoshop as well. Adobe Photoshop is a super fast imaging software with an ever-expanding array of features, but of particular interest to this writer is the new ability to modify vector images in ways that make it very easy to create highly-detailed line art and illustrations. Adobe Photoshop Elements, unlike Apple's own Apple's own elements app is not a straight clone of the desktop version. Elements users get a suite of drawing tools, selective-layer editing options—and lots of other free artistic goodies as well. The app includes built-in Smart Filters, like Exposure Filters. With Smart Filters, you simply touch on a pre-loaded image to apply filters, like sun flares or a photo effect that changes the perspective of the image. You also get Adjustment Layers, which you can use to edit any part of your photo without changing the overall image. Other adjustments include Hue/Saturation, Levels and Curves. Features include the Sharpen tool, Clone Stamp tool, Eraser tool, Batch image control and a tool for creating vignettes.
